SUSTAINABILITY

FOOD DIGESTER - Food digester helps reduce the volume of organic waste, particularly food scraps and kitchen leftovers, by breaking down these materials into nutrient-rich compost. On an average, a 450 kg of loaded waste harvests 156kg of dry fertilizer used around the resort. It is one of the largest in the Maldives.

NO SINGLE USE PLASTIC, STIRRERS AND BOTTLES - We have replaced plastic bottles with glass bottles across our restaurants and villas eliminating the use of approximately 100,000 plastic bottles annually

LINEN RE-USE PROGRAM - Reducing the frequency of linen change presents a great opportunity for savings in water, energy and detergent use.

CORAL NURSERY PLANTING - The resort, in cooperation with guests, conducts coral nursery planting of restoring degraded coral reefs. By providing a controlled environment for coral fragments to grow and develop, nurseries contribute to the recovery of damaged reef ecosystems.

TREE PLANTING - Various plants were given by the Dhigu Island community in exchange for our assistance. Tree planting was done all around the resort.

REDUCTION OF ENERGY, WATER AND CARBON EMISSIONS

Hot water is heated with excess energy from generators. Colleagues are continuously educated and trained on ways to reduce energy, water and carbon emissions.

COMMUNITY ENGAGEMENT & OUTREACH - The resort supports the nearby island of Dhigura by providing school supplies and other educational items for the community.
